APPLICATIONS

- air compressor (piston or screw)
- after-cooler
- cyclone condensate separator
- pressure vessel/air tank
- air dryer
- air filter

**PATENTED VALVE
TECHNOLOGY**

DESCRIPTION

CDi16B has been developed for fully automatic discharging of condensate or any other non-aggressive fluid from compressed air system. The unit can be installed as external drain on any application specified below.

Condensate accumulates in the collecting vessel and when the level is high enough condensate is being discharged from the system without any air losses. Electronic control system has a precise capacitive level sensor through which is controlled solenoid piston valve.

A special self-cleaning piston valve prevents disturbing the function of CDi16B caused by debris. CDi16B is also equipped with operation alarm, led indicator and test button.
